Professor Guide

From an empty course to released results, in the order you'll do it. TAs can do every step except the ones marked **Instructor only**.

Before you start: sign in with the email and password you were given, or with `Sign in with Google` using your **@iitrpr.ac.in** account. The badge at the top right must say **instructor**. If it says **student**, ask the admin to change your role (the admin does this on the `Users` page).

1 Create a course

1. On the Home page, click `New course`.
2. Enter a **Course Code** (e.g. CS101) and a **Course Name**. You can also paste **Student Emails** now, comma-separated or one per line.
3. Click `Create course`. You become its instructor.

2 Add students and TAs

1. Open the course and go to **Roster**.
2. `Add member` adds one email with a role (student, TA or instructor). `Bulk enroll` adds a pasted list of emails.

Students without an account yet are kept as pending and join the course automatically when they register with that email. **Instructor only:** adding, removing or promoting members.

3 Create a quiz and set it up

1. On the course page click `New quiz`. The quiz editor opens.
2. Under **Settings**, fill in:
   - **Title** and **Instructions** (Markdown and LaTeX maths work).
   - **Quiz type**: *Anytime*, or *Scheduled* with **Window opens at** and a duration.
   - **Time limit** and **Attempts allowed**.
   - **Show scores**: *Immediately on submit*, *When instructor releases* or *Never (private)*.
   - **Randomization**: shuffle questions and/or options.
3. Click `Save`.

4 Add questions

1. Click `Add question` and pick a type: *Single choice*, *Multiple choice*, *Numeric*, *Short answer* or *Descriptive (marked by hand)*.
2. Enter the question, the correct answer (or a **Marking guide** for descriptive questions) and the marks.
3. To reuse questions, keep them in the course's `Question Banks`. Then use `Import from Bank`, or **Add questions from a bank** to give each student a different random set.

5 Choose the exam rules

1. Open `Exam rules & proctoring` and choose a preset:
   - **Practice**: nothing is monitored.
   - **Monitored**: tab switches are recorded and warned, copy/paste is blocked, and a watermark is shown.
   - **Strict exam**: full screen, no re-entry, and the attempt locks after 3 violations.
2. Fine-tune if needed:
   - **Require full screen** and **Allow switching tabs**.
   - **Access code**: announce it in the exam hall.
   - **Late entry closes after (min)**.
   - What happens after too many violations: *Warn & record only*, *Lock for my review* or *Submit automatically*.

6 Check and publish (Instructor only)

1. Check what students will see from the quiz's pre-exam page, then click `Publish live version`. Students can now see the quiz.
2. Published questions are frozen. To change them, click `Create new draft version`, edit it and publish again.
3. To fix a wrong answer after the exam, use **Edit answer key**. It regrades papers that were already submitted.

7 Run the exam live

1. On the course page click `Live monitor`. You see every student's status, progress, time left and violations.
2. Use `Announce` to message everyone or specific students (they see it within about 15 s). Raised hands pop up for you to reply.
3. **Instructor only:** `Extend time`, `Pause quiz` / `Resume quiz`, `End quiz now`, `Reopen`.
4. **Instructor only:** the menu on each student's row has *Allow re-entry*, *Clear violations*, *Submit for student* and *Disconnect device*. *Open full audit* shows that student's complete history (TAs can open it too).

8 Deal with locked or flagged students

1. Click `Incidents` in the top bar and open the attempt. Its timeline shows every tab switch, disconnect and flag.
2. **Instructor only:** rule *reinstate* (student continues), *allow submit*, or keep it *locked*. Always write a reason; it is kept in the audit trail.

9 Mark, review and release

1. On the course page, open `Analytics` for the quiz. It has these tabs:
   - **Overview**
   - **Marking**: mark descriptive answers, add feedback, then `Save marks`.
   - **Questions & regrade**
   - **Random fairness**
   - **Cheating check**
   - **Appeals**
2. **Instructor only:** regrade, resolve appeals, then `Release results` on the course page. Release can't be undone, and it is only needed if **Show scores** is *When instructor releases*.
3. **Instructor only:** download marks with `Gradebook CSV`.

Quick fixes

Student says…	Do this
"I can't see the quiz"	Check they are in the Roster and the quiz is published (and the scheduled window is open).
"It asks for an access code"	Announce the code you set in **Exam rules & proctoring**.
"My attempt is locked"	Instructor: open **Incidents**, read the timeline, then reinstate or allow submit.
"My laptop died / I closed the tab"	Instructor: Live monitor → their row → *Allow re-entry* (only needed if leaving and continuing later is off).
"I need extra time" (approved need)	Instructor: course page → `Accommodations`: extra minutes or a time multiplier.
"I can't see my score"	Show scores is *When instructor releases*; click **Release results** when ready.

Tip: press **Ctrl + K** anywhere to jump to a course, quiz or page.
