REPOSITORY AND README

Interval

GOALS

LESS COORDINATION.
MORE ATTENTION TO QUIZ.

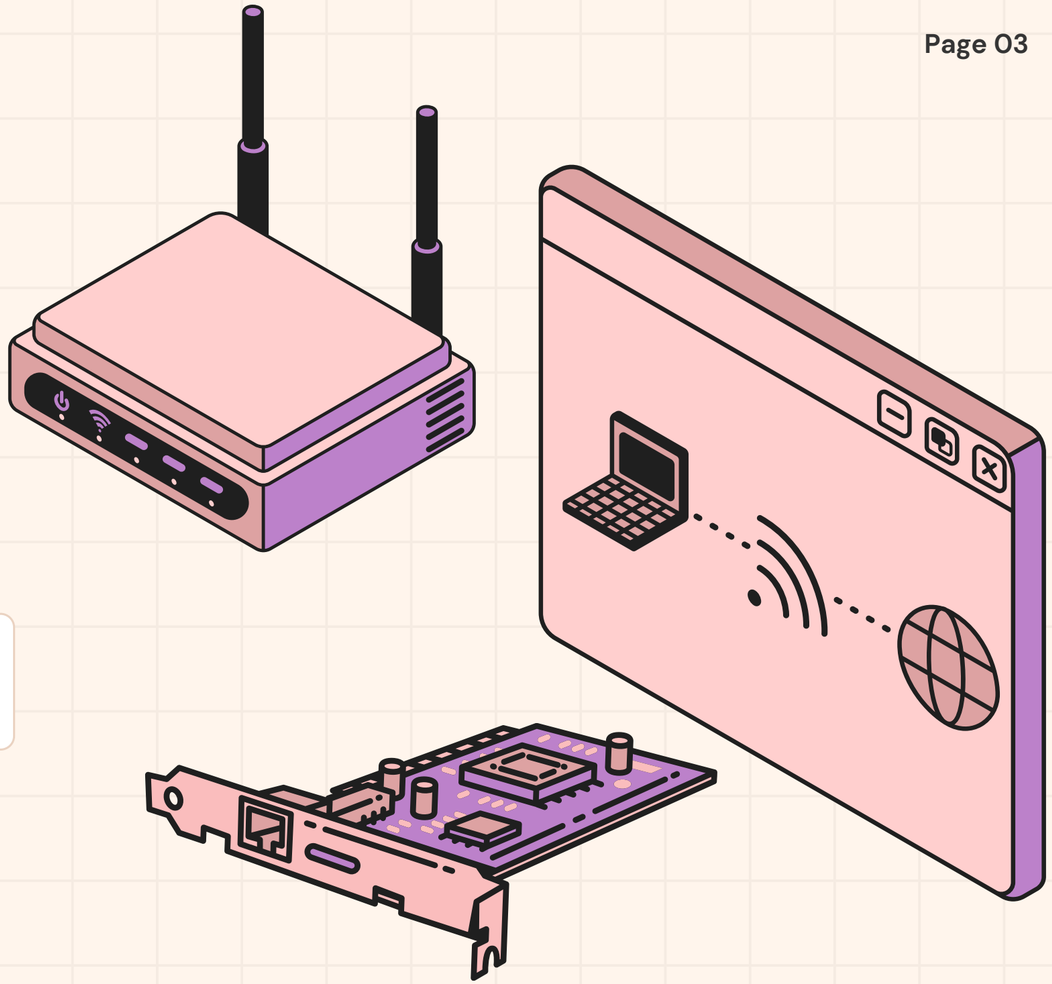

Design Concern	Objective
Split question and answer surfaces	Keep questions and answers together
Uncertain saves and completion	Acknowledge saves; confirm submission
Opaque rules and penalties	Explain policy before start; provide review
Risky changes to a live quiz	Separate drafts from published structure

Interval

METHODOLOGY & TECHINCAL IMPL.

Instructor Flow: Draft → Review → Publish
Student Flow: Read rules → Answer → Confirm submission

React interface
Instructor and student tasks

→

Express API
Permissions and attempt state

→

SQLite storage
Answers, results and audit records

Server-owned deadlines
The browser displays server time.

Revision-confirmed saves
Older writes cannot undo newer answers.

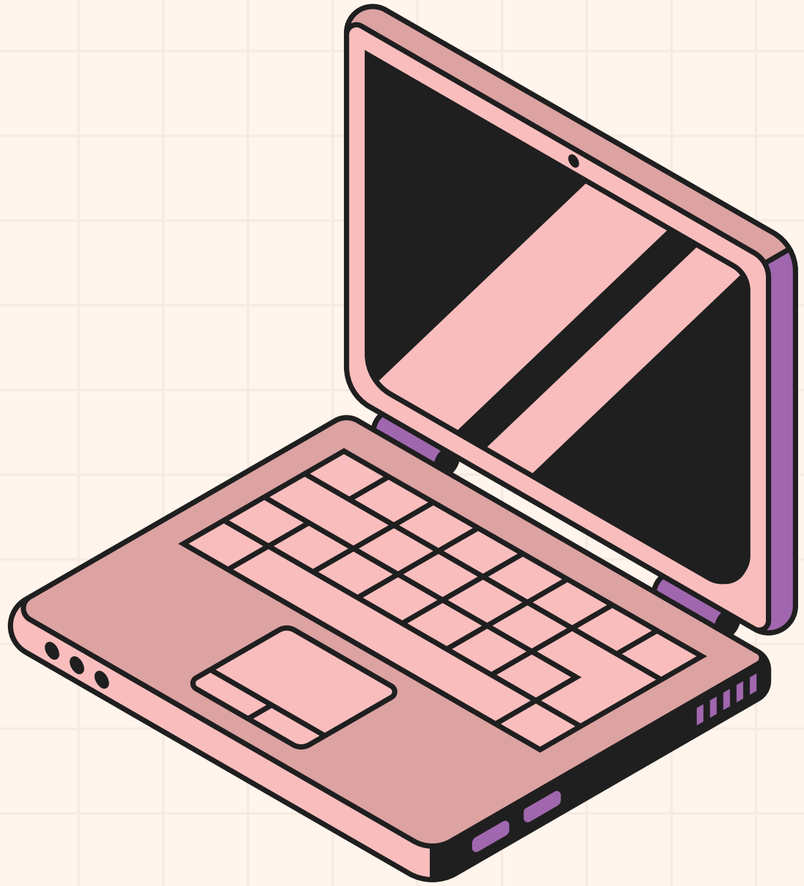

Transactional submission
Close the attempt and return a receipt.

Define → Design → Build → Test → Improve → Validate

Interval

RESULTS & EVALUATION
TESTING HIGHLIGHTED ISSUES

FOUND IN EVALUATION	CHANGED IN THE BUILD
Students could not reach the quiz list	**Course-member access; staff data stays gated**
Question entry was interrupted by reloads	**Update the changed question, not the whole form**
Session restoration and error feedback failed	**Bootstrap guard and visible error messages**

TASK RUNS
5/5 INSTRUCTOR · 5/5 STUDENT · 0 BLOCKING ERRORS

AUTOMATED STRUCTURAL ACCESSIBILITY
49/55 PASS
(MISSING SKIP LINKS)

Interval

FINDINGS INSIGHT AND KEY LEARNING

FINDINGS

Access, editor reloads and unclear feedback obstructed the two core journeys. Later task records contain no blocking errors.

INSIGHTS

- Users need to know what the system accepted and what happens next.
- Permissions and recovery are usability concerns, not only backend rules.

KEY LEARNINGS

Test complete role-based journeys and their boundaries.
Distinguish pending, acknowledged and submitted work.
Explain locks and preserve a human review path.
